

WHICH ONE DO YOU WANT NEARBY DURING A HEART ATTACK?

Nearly 80% of all heart attacks occur in the home – and emergency medical services take an average of 6 minutes or more to arrive. *But now you can act even before they come.* **Home defibrillators (A) are easy to use, and dramatically increase your chances of surviving a sudden heart attack.**

Heart attacks kill more people than breast cancer, prostate cancer, AIDS, handguns, house fires, and traffic accidents combined. *Yet most victims had no previous symptoms of heart disease.*
